SureDuct is a safety tool that **protects workers** and **limits the risk of damage** in jobs where ducting must be cut to access cables.

Cable strikes are potentially lethal to workers and costly for cable owners such as electricity, telecoms and connectivity providers.

SureDuct is a set of hard-wearing anodised cutting discs fitted with colour-coded precision depth limiters. Simply identify the type of duct that needs to be accessed, select the matching disc, and attach it to a standard multi-tool.

SureDuct limits the cut to the exact depth needed to expose the cable – and no more.

Why use SureDuct?

SureDuct protects your people and your organisation against:

The risk of fatal or life-changing injuries caused by live cables

Damage to any kind of cable where ducting must be cut to gain access

Service downtime caused by cable damage

The cost of repairs to damaged cables

The reputational damage caused by service outages
